

Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner

This product is a dual-purpose environmentally friendly gel cleaner, clarifier and conditioner. It can be used in jetted bathtubs and all spas and hot tubs. This stay-clear gel is specifically engineered to provide a cleaner and safer environment in which to bathe and soak. Please follow these dosage and usage instructions for best results.

Hot Tub / Spa Instructions:

Typically, hot tubs can get a build-up of particulates inside the plumbing infrastructure that is like a plaque. Initially, Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner will be used to "PURGE" this bio-film from the plumbing and spa shell. You MUST do the initial purge before you use this product on a weekly basis. Add one tablespoon of gel to your hot tub while it is filled. Run the jets and blower system for at least 15-20 minutes. You will notice a brown frothy coating on the water surface. This is the gunk and bio-film getting purged. Shut off power. Drain the vessel. Rinse the shell thoroughly. Wipe it clean. Hose off the filter cartridge(s). Add new water. Maintain a pH of 7.4-7.8. Adjust total alkalinity (TA) in the 80-120 range. Add a sanitizer, whatever you were previously using. Bromine or chlorine is the most common product. Now, add 1 level teaspoon of Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner per 500 gallons weekly. Most hot tubs are around 250 gallons so you would typically add about one half a teaspoon every WEEK. Just place the gel into the spa and add a little sanitizer or non-chlorine shock, whatever you typically use on an ongoing basis. Most people place a little on their finger and swash it around the tub.

Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner works with any sanitizer. Most people use a little "Di-Chlor" granular chlorine. Other people use Bromine. Still others use bleach or other sanitizer, including Bacquacil, Soft Swim, Nature2 or Spa Frog. You can expect a little foaming when Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner is first added. This is NORMAL. Never use too much at any one time as you will get too much foam on the spa surface. A little is ok and shows you are using just the right amount. **Using Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner will allow you to drastically reduce the need for sanitizer and other ancillary chemicals to maintain clarity and provide safe and comfortable water. You can expect to use about half of the sanitizer you were typically using while using this product.** Water will not be overloaded with harsh chemicals that can aggravate your skin or nasal system. Water will also feel much softer and silkier.

Remember to drain your vessel ever 2-3 months to eliminate the build-up of dissolved solids. You do not have to do the purge that you did initially. This is done usually only once. Your hot tubs plumbing and shell infrastructure will always be whistle clean providing you the comfort of knowing you are now bathing and soaking in a "super-clean" environment. Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner does not replace your spa sanitizer. It will allow you to use less of it, which is what most people are interested in. Less is better.
